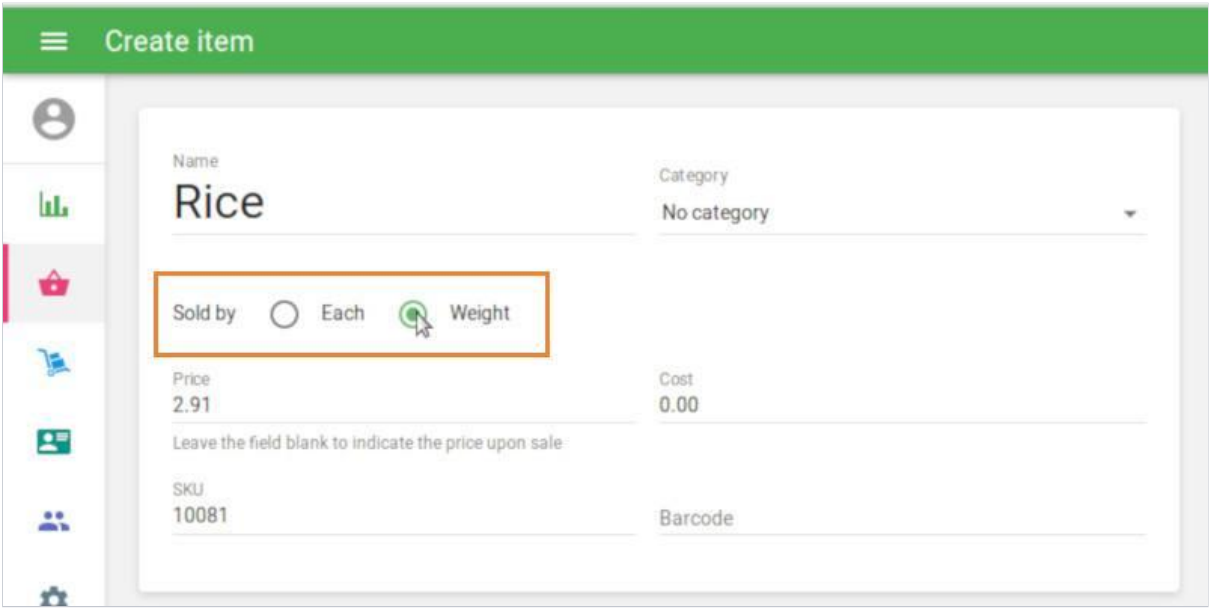
Items in Loyverse POS can be sold either by piece (e.g., bottles, packs) or by weight (e.g., kilograms, pounds). Follow the steps below to configure and sell weight-based items in both the Back Office and the POS app.

1. Configure “Sold By” Option

In the Back Office

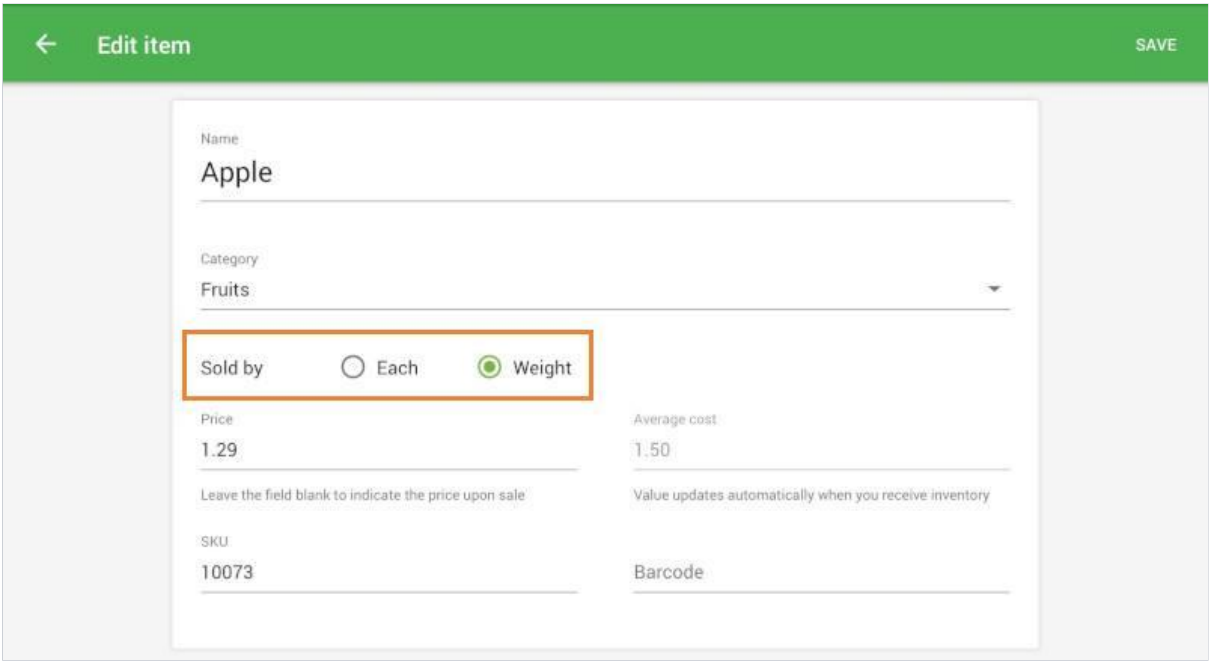
1. Log in to your Back Office.
2. Go to **Items > Item list**.
3. Select an existing item or click **Add item** to create a new one.
4. Find the **Sold By** line and choose **Weight**.



5. Enter the **Price** per unit of weight (for example, price per kg or per lb).
6. Click **Save**.

In the Loyverse POS App

1. Open the Loyverse POS app.
2. Tap ☰ **Menu** (top left) and select **Items**.
3. Tap an existing item or the ⊕ **Add** button (bottom right).
4. Under **Sold By**, choose **Weight**.



5. Enter the **Price** per unit of weight.
6. Tap **Save**.

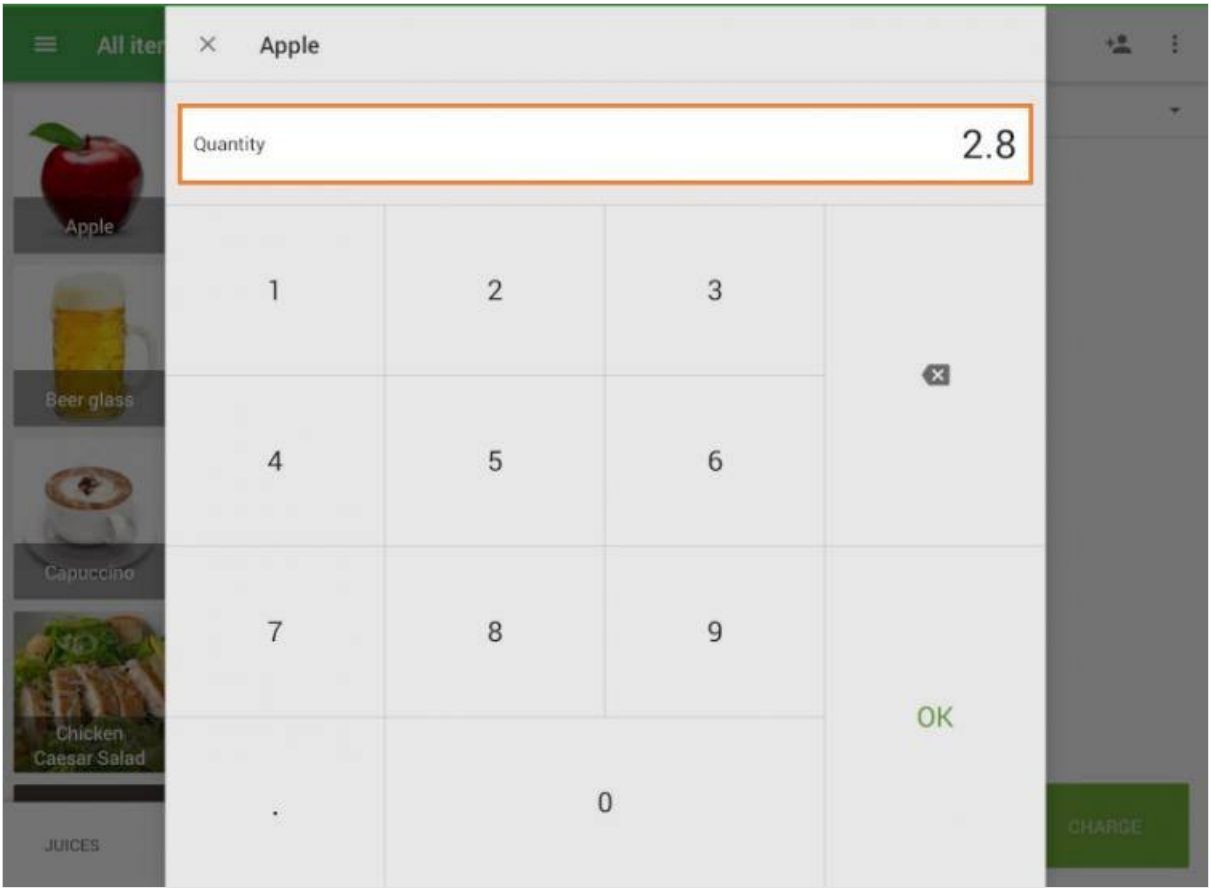
2. Selling a Weighted Item

Go to the **Sales** screen in the POS app.

Tap the item icon to add it to the ticket.

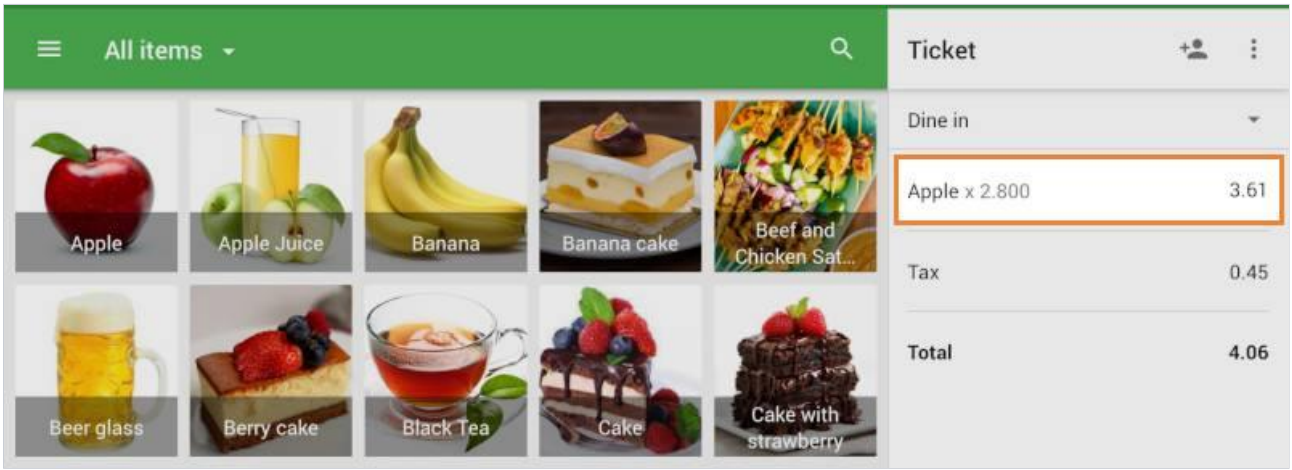
A numeric keypad will pop up:

- Enter the actual weight (e.g., 2.8 for 2.8 kg).



- Tap OK.

The system calculates: **Price** per unit × **Entered weight** = **Line total**



Complete the sale as usual (see "How to Make Sales" for payment steps).

With these steps, you can seamlessly sell items by weight, ensuring accurate pricing and inventory management in Loyverse POS.
